Ontario Influenza Bulletin 2006-2007 Season

SURVEILLANCE WEEK 28-29 (July 8 – July 21) 2007

This issue of the Ontario Influenza Bulletin provides information on the surveillance period from July 8- July 21, 2007, (Weeks 28 & 29). The analysis for this issue occurred on Thursday July 26, 2007, therefore all data is current to that date unless otherwise specified.

Overall, influenza activity in Ontario during weeks 28 and 29, 2007 was the same as during weeks 26 and 27, 2007. No sporadically occurring cases of influenza were reported through iPHIS from health units. There were no reports of institutional outbreaks of influenza. For weeks 28 and 29, all regions in Ontario reported 'no activity' for influenza.

The Bulletin will continue to be published on alternate weeks and the GIS map of influenza activity levels will be posted on 'non-Bulletin' weeks under 'Weekly Influenza Surveillance Maps' at the following link: http://www.health.gov.on.ca/english/providers/program/pubhealth/flu/flu_mn.html

Please continue to submit weekly activity reports weekly by 4 p.m. every Tuesday. Please refer to page 13 for report submission dates.

Table 1: Summary of confirmed influenza cases and institutional influenza outbreaks by health region (Weeks 28 & 29, 2007).

Confirmed influenza cases*	HEALTH REGION							TOTAL
	North West	North East	Eastern	Central East	Toronto	South West	Central West	
Influenza A	0	0	0	0	0	0	0	0
Influenza B	0	0	0	0	0	0	0	0
Influenza A & B	0	0	0	0	0	0	0	0
Total new cases	0	0	0	0	0	0	0	0
Institutional influenza outbreaks‡	**0**	**0**	**0**	**0**	**0**	**0**	**0**	**0**

SOURCE: MOHLTC [iPHIS, Health Unit Reports to PHD]

* Includes reports of sporadically occurring influenza through iPHIS, as well as cases in institutional outbreaks, with dates of onset in the surveillance period.

‡ Confirmed outbreaks in institutions with onset date of symptoms during the surveillance period.

SOURCE: MOHLTC [iPHIS, Health Unit Reports have been extracted using CRN at PHD]

* Cumulative case counts include late reports and records that are otherwise reconciled. Therefore, cumulative counts may not equal new cases plus previous cumulative value.

† Episode Date for a case corresponds to the earliest date on record for the case according to the iPHIS hierarchy (Symptom Date > Clinical Diagnosis Date > Specimen Collection Date > Lab Test Date > Reported Date)

Influenza Subtype(s):
During Weeks 28 and 29, 1345 isolates were received by the Public Health Agency of Canada, with three testing positive for influenza A, all three were from Alberta. One isolate tested positive for influenza B, it was from Nova Scotia.*

Antigenic Characterization:
No new influenza virus characterizations have been reported in weeks 27 and 28. To date, the National Microbiology Laboratory (NML) has characterized 990 influenza viruses for the 2006-2007 influenza season: 260 (26%) A/New Caledonia/20/1999(H1N1)-like, 612 (62%) A/Wisconsin/67/05(H3N2)-like, 12 (1%) B/Malaysia/2506/2004-like, and 106 (11%) B/Shanghai/361/2002-like. All but the B/Shanghai/361/2002-like strain are included in the composition of the 2006-2007 Canadian influenza vaccine. Of the influenza A viruses characterized, 77% of the A(H1N1) viruses were from the West while the majority of the A(H3N2) viruses were from Ontario (53%) and British Columbia (25%). **

Antiviral Resistance:
No new antiviral resistance findings have been reported in weeks 27 and 28. However, since the start of the season, the NML has tested 995 influenza A isolates (257 H1N1, 738 H3N2) for amantadine resistance. Three (1% or 3/257) of the H1N1 isolates tested were resistant to amantadine (the resistant isolates originated from Ontario and British Columbia). Of the H3N2 isolates tested, 37% (272/738) were resistant. Of the 1009 influenza A and B isolates (891 influenza A, 118 influenza B) tested for oseltamivir resistance, one (0.1% or 1/1009) influenza A(H3N2) isolate was found to be resistant (from Ontario). **

Note: The WHO recommends that the trivalent vaccine for the 2007-2008 season in the northern hemisphere (which includes Canada) contain an A/Solomon Islands (H1N1)-like virus; an A/Wisconsin (H3N2)-like virus; and a B/Malaysia-like virus.

** These data have been obtained from the Respiratory Virus Detection tables of Public Health Agency of Canada: Weeks 28 & 29, 2007.
* These data have been obtained from the FluWatch report of the Public Health Agency of Canada for Week 27-28, 2007.

* New outbreaks are those in which the date of onset of illness in the first case occurred and recorded through iPHIS in the current surveillance period; i.e. July 8 – July 21, 2007

** Season to date includes all outbreaks in which the date of onset of illness in the first case occurred from September 1, 2006 – July 21, 2007

† Combined outbreaks include outbreaks in which more than one non-influenza organism has been identified (e.g. RSV, parainfluenza, rhinovirus, etc.)

APPENDIX - I

Definitions for influenza activity levels:

No Data: No activity report corresponding to the surveillance week was received at the Ministry of Health and Long-Term Care Call Centre by the Tuesday (at 4 p.m.) following the end of the surveillance period.

No Activity: No laboratory confirmed* influenza cases(s) or outbreak detected during the past four weeks within the influenza surveillance region, however, sporadically occurring **ILI** may be reported†

Sporadic: Sporadically occurring **ILI and laboratory confirmed influenza* case(s) with NO outbreaks** detected within the influenza surveillance region†

Localized: sporadically occurring **ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI** in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring **in less than 50% of the influenza surveillance region(s)**†

Widespread: sporadically occurring **ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI** in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring **in greater than or equal to 50% of the influenza surveillance region(s)**†

* Confirmation of influenza within the surveillance region at any time within the prior week
† Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist

Influenza-Like Illness (ILI) Definitions:

A) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which could be due to influenza virus. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

B) ILI/Influenza outbreaks:

Schools and work sites: greater than 10% absenteeism on any day, most likely due to ILI.

Residential institutions: two or more cases of ILI within a seven-day period, **including at least one laboratory confirmed case**.

Influenza Surveillance Weeks 2006-2007 and date of submission of Appendix C

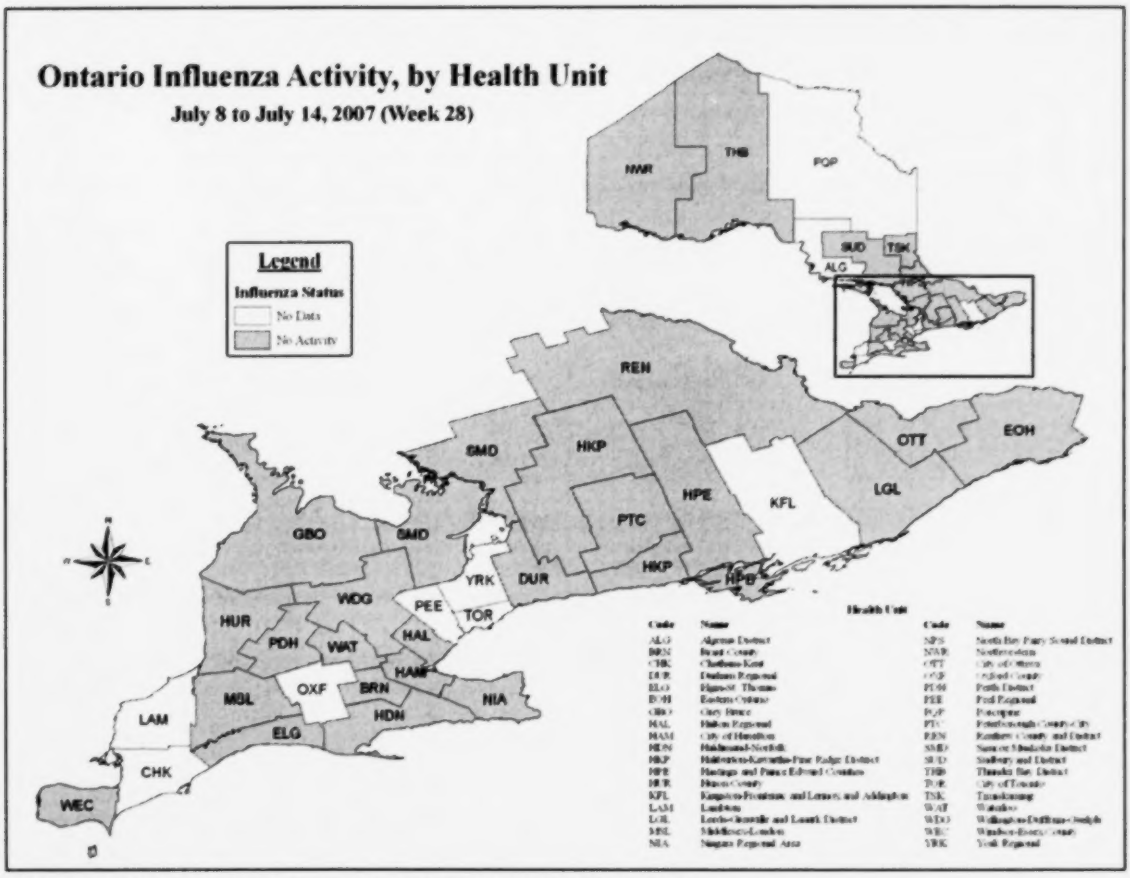
Ontario

Ministry of Health and Long-Term Care
Public Health Division
Weekly Ontario Influenza Activity Map



SOURCE: MOHLTC [Provincial Influenza Activity Report (Appendix C) Database]

Influenza Activity levels are assigned by local public health units and reported to the MOHLTC every week. Activity levels are assigned based on laboratory confirmation of influenza, influenza like illness (ILI) reports from various sources including hospitals, institutions experiencing respiratory infection outbreaks, physicians' offices, etc.

Activity level definitions for the 2006-07 influenza seasons are as follows:
No Data: No activity report corresponding to the surveillance week was received at the Ministry of Health and Long-Term Care Call Centre by the Tuesday (at 4 p.m.) following the end of the surveillance period. **No Activity:** No laboratory confirmed* influenza cases(s) or outbreak detected during the past week within the influenza surveillance region, however, sporadically occurring ILI may be reported. **Sporadic:** Sporadically occurring ILI and laboratory confirmed influenza* case(s) with NO outbreaks detected within the influenza surveillance region **Localized:** sporadically occurring ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring in less than 50% of the influenza surveillance region(s) **Widespread:** sporadically occurring ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring in greater than or equal to 50% of the influenza surveillance region(s)
** Confirmation of influenza within the surveillance region at any time within the prior week*

Note: The Weekly Ontario Influenza Activity Map will be posted on this site bi-weekly, alternating with the *Ontario Influenza Bulletin* **(which contains the Influenza Activity map), until the end of October, 2007. As of November 4, 2007, the** *Ontario Influenza Bulletin* **will be published weekly.**
